### 3. COSTS AND CHARGES PER SB ASSET CLASS

The following information is valid across all asset classes and may be instrument-specific depending on the nature of the instrument, as previously outlined in Table 1. The formulas aim to provide, transparency on the methodology used in order to calculate the various costs and charges as aforementioned.

#### Calculation Assumptions

- Costs displayed in cash and percentage terms are calculated on a round trip basis;
- The End of Day Price is assumed to be equal to the Entry Price;
- Working examples include scenarios capturing both long and short positions held;
- The client has an account denominated in the same currency as the instrument's currency.

#### Costs and Charges – WebTrader / MobileTrader Platforms

Spread = Quantity \* Instrument Spread

Overnight Swap = Quantity \* End of Day Price \* Overnight Swap Rate \* Days Held

Transactions Tax = Dividend Amount \* 30%

#### Profit or Loss – Applicable to all platforms

Long Positions = (Quantity \* Current Price) – (Quantity \* Entry Price)

Short Positions = (Quantity \* Entry Price) – (Quantity \* Current Price)
